Tree Planting and Tree Care

A few tips to ensure a healthy life for new trees around your home

Cut & remove all twine from the tree as well as the wire basket and burlap from the root ball. Set the tree into the hole, be sure that the trunk flare is level or slightly above the surrounding grade. If the tree is a container tree, rough up the roots before placing in the hole. After the tree has been backfilled, top with approximately 2-3" of mulch for moisture retention, avoid mounding mulch around the trunk. Water adequately.
